I respectfully urge the FCC to reject the NAB's petition 04-160 and to support XM's ability to provide the kind of programming that I demand, deserve and pay for. This is a new technology and must not be put aside by forces tied to older technologies. XM Instant Traffic & Weather is a service that is helpful to me while traveling. I preprogram the cities that I need. Then when I need the information on weather and traffic I push one button to obtain the information that I need. Otherwise in each different city I have to traverse the dial while driving to find a station that may provide the information on weather and traffic. This is a major distraction and is a safety issue that could cause a traffic accident.

Again I urge the FCC to reject the NAB's petition 04-160 and to support XM's ability to provide the kind of programming that I demand, deserve and pay for.

Thank you.
